

## METAL

You have enriched your home with our furniture that contains parts made of metal. We would like to familiarise you with the characteristics of this material and how to take care of it.

**INOX** is an ecological material without harmful effects on humans and the environment and an ideal choice for modern interiors, considering that it combines very well with a whole range of finishes and materials. Due to its excellent characteristics, this stainless steel is resistant to corrosion and stains, meaning additional layers of protection are not necessary, but it still requires a certain level of maintenance.

**PLASTIC COATED METAL** is a metal that is coated with plastic paint in the plastification process, i.e. coated with a thin layer of protective plastic in a particular shade (RAL). In addition to the quality of surface protection, such as resistance to wear and corrosion, this material also fulfils the standards for environmental protection because solvents and additives harmful to health and the environment are not used in this process.

### HOW TO CARE FOR METAL?

In order to properly maintain and clean metal surfaces, it is important to adhere to the following:

- It is recommended to regularly vacuum or wipe the surface with a soft cotton cloth.
- To remove most traces, which are most often fingerprints, use plain water in which you can add a neutral cleaning agent.
- For traces that are more difficult to remove, a mild window cleaner or a spray made of water and vinegar in an 80/20 ratio and a soft cloth can be used.
- After cleaning, it is recommended to rinse with clean cold water and wipe with a dry cotton cloth.
- Scraping with metal objects, steel wool, etc. is **STRICTLY FORBIDDEN**, as well as the use of products containing: hydrochloric acid, bleaches, silver cleaners and abrasives.
